

# TRUSTED CONSTRUCTION SOFTWARE FOR PRIVATE SCHOOLS

The complexities of private school construction management can be a challenge. Owner Insite has developed project management tools to help ensure the facilities of the future are built correctly, on time, and on budget.

## WHY YOUR NEXT PRIVATE SCHOOL PROJECT NEEDS OWNER INSITE

Ensure project success and deliver the best to your constituents.

School systems juggle multiple construction projects with tight timelines, strict budgets and multiple stakeholders. Owner Insite's software gives users transparency and complete control by allowing instant access to any renovation, new construction, or your construction program.

Provide everyone involved with high-level reporting, project oversight, and accountability.

Owner Insite's cloud-based platform was designed to accommodate a school system's needs, from budgeting and tracking to school boards and oversight committees' needs. Users have visibility to the work done by contracts, as well as change requests, approvals and even design changes from architects and engineers.

Field questions from constituents quickly and easily.

School board meetings will go smoothly because Owner Insite provides users answers right at their fingertips. Quick to set up, our easy-to-use software also has a unique pricing structure making it affordable and invaluable for virtually any private school construction project.

### Complete Project Visibility

### Strong Custom Reporting

### Affordable Project Pricing

### Tools Everyone Can Use

# PRIVATE SCHOOL PROJECT CHECKLIST

## ARE YOU RENOVATING OR BUILDING A NEW FACILITY?

Here are a few questions you might want to ask and answer before you get started;

- ✓ Is there a communication plan in place for the project team?
- ✓ Is there common agreement amongst all project stakeholders about how documents will be tracked, responded to and maintained?
- ✓ Does your project contract with each project stakeholder stipulate response time expectations?
- ✓ If issues arise amongst the project team, who will lead the effort to resolve the conflict?
- ✓ What project data does the owner of the project expect to receive on a daily, weekly or monthly basis and through what system will that data be used to store and share that information?
- ✓ Are there efficiencies built into the pay application process to ensure accurate documentation is submitted every time to avoid payment delays?
- ✓ If issues arise that may affect the project budget, who will take point to review and ultimately approve?
- ✓ Everyone assumes that everyone has common sense on things like data tracking, communication and reasonable response time. But not everyone has the same common sense. Is there a plan to set a standard from the onset of the project to ensure every stakeholder is operating under the same understanding of acceptable requirements?
- ✓ As the owner of the project, is all project data ultimately ending up in your own owner-focused platform to ensure data consistency, accuracy and long-term memorialization?
- ✓ Does everyone on the team agree to be open, honest and committed to delivering the project on time, on budget and with the best interest of the owner (you) in mind?
